Path of Construction Asbestos Survey  
Bank of America - 2700 Main St Site  
2700 Main Street  
Newfane, New York  
Mail Code: MY7-127

Dear Mr. Schlegel:

ARCADIS U.S., Inc. (ARCADIS) conducted a Path of Construction (POC) asbestos survey of certain Homogeneous Applications (HAs) that may be impacted during the planned construction project at the above-referenced building for the Bank of America. ARCADIS' scope of work and the findings of POC survey are summarized herein.

#### **ASBESTOS SURVEY SCOPE OF WORK**

Based on review of information provided to ARCADIS, sample collection and analysis of the following HAs was required to determine if these HAs were asbestos-containing building materials (ACBMs):

- HA-37, Window Caulk;
- HA-38, Window Glazing;
- HA-39, Window Caulk;
- HA-40, Patch/Repair Caulk;
- HA-41, Patch/Repair Glazing;
- HA-42, Window Glazing;
- HA-43, Window Glazing; and
- HA-44, Window Caulk.

On April 27, 2011, Mr. Tom Ashman visited the building to collect samples of these HAs. A copy of Mr. Dolan's asbestos inspector license is provided in Attachment A. In total, 28 bulk samples were collected and submitted for laboratory analyses.

The results of the POC asbestos survey are presented in the Attachments to this report as follows:

- Attachment B – Homogeneous Application Table (HAT)
- Attachment C – Laboratory Data Package and Chain of Custody
- Attachment D – Floor Plans indicating Sampling Locations
- Attachment E – Photographs of the HAs

The scope of this POC survey was limited to sampling only the HAs previously listed. If additional suspect ACBMs not referenced in this report are encountered, samples of the material(s) should be collected and analyzed for the presence or absence of asbestos prior to disturbance.

## CONCLUSIONS

As presented in the HAT in Attachment B and the Laboratory Data Package in Attachment C, the following HAs are ACBMs:

- HA-38, Window Glazing, located in the stairwell and Men's & Women's Rooms;
- HA-41, Patch/Repair Glazing, West Elevation. Women's Room;
- HA-42, Window Glazing, West Elevation - Men's & Women's Rooms;
- HA-43, Window Glazing, West Elevation – Stairwell; and
- HA-44, Window Caulk, West Elevation - Men's & Women's Rooms, Stairwell.

As the above listed ACBMs will be disturbed during construction activities, compliance with the asbestos regulations (notification, control measures and/or abatement) is required. Contact the Property Manager or ARCADIS if you have questions or need assistance concerning this report or in reading the HAT.

ARCADIS recommends that the ACBMs be managed in accordance with an Operations & Maintenance (O & M) Program with abatement only being required when materials will be disturbed (i.e., renovation and some maintenance activities). ACBMs that are “Damaged” or “Significantly Damaged” present a greater risk of releasing asbestos fibers. Therefore, these materials should be evaluated to determine if they require repair or abatement. If the materials are repaired or abated, the HAT should be updated to reflect this modification to the materials. Contact the building’s Property Manager to determine what actions are necessary with respect to “Damaged” or “Significantly Damaged” materials, if present.

**CLOSING**

The POC asbestos survey described herein was conducted by the undersigned of ARCADIS. This investigation consisted solely of the activities described herein and is subject to the Limitations and Service Constraints in Attachment F.

Thank you for your time and consideration on this project. Please do not hesitate to call if you have questions regarding the results of this limited survey or require additional information.

Sincerely,

ARCADIS U.S., Inc.

EMSL maintains liability limited to cost of analysis. This report relates only to the samples reported above and may not be reproduced, except in full, without written approval by EMSL. The above test report relates only to the items tested. This test report must not be used to claim product endorsement by NVLAP or any agency of the U.S. Government. EMSL bears no responsibility for sample collection activities or analytical method limitations. The results in this report meet all requirements of the NELAC Standards unless otherwise noted. The laboratory is not responsible for the accuracy of results when requested to physically separate and analyze layered samples. PLM is not consistently reliable in detecting asbestos in floor coverings and similar NOB's. Quantitative TEM is currently the only method that can be used to determine if a NOB material can be considered or treated as non-asbestos containing.

| NY7-127- 03C  |     |     | ↓             | ↓                  | EXT   | ↓ ↓ ↓ SOUTH ELEVATION                                |

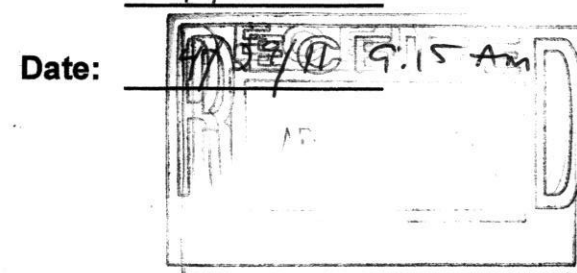

Analyze all non-NOB samples by NYS ELAP 198.1 PLM methodology. Analyze all NOB samples initially by NYS ELAP 198.6 PLM methodology. If all samples from a given sample set are reported as non-asbestos by 198.6, analyze by NYS ELAP 198.4 TEM methodology. Stop analysis after 1st positive for a given sample set. Email results to John Luxford (john.luxford@arcadis-us.com) and Nancy Katz (nancy.katz@arcadis-us.com).

## LIMITATIONS AND SERVICE CONSTRAINTS

### Asbestos Related Services

All professional opinions presented in this report are based on information made available to us either by review of data provided by others or data gathered by ARCADIS personnel.

ARCADIS affirms that data gathered and presented by ARCADIS in this report was collected in an appropriate manner in accordance with generally accepted methods and practices. ARCADIS cannot be responsible for decisions made by our client solely on the basis of economic factors.

Conditions described in this report are as found at the time of investigation, unless otherwise stated.

ARCADIS analyzed only the substances, conditions and locations described in the report at the time indicated. No inferences regarding other substances, conditions, location or time can be made unless specifically stated in this report.

No recommendations were provided for materials containing less than one- percent asbestos. Materials containing less than one percent asbestos do not meet either the generally accepted industry definition of asbestos-containing material (any material containing greater than one percent asbestos) or the EPA definition of friable ACM (any material friable bulk insulation material contain greater than one percent asbestos by weight as analyzed by Polarized Light Microscopy.) ARCADIS, however, makes no statement, implied or explicit, about the hazards of materials containing less than one percent asbestos.

This report is intended for the use listed in the section of this report described as the Introduction. The use of this report in any manner other than that listed in the Introduction requires the written consent of ARCADIS. This report must be presented in its entirety.
