RE: Phase I Environmental Site Assessment
Pizza Hut
812 Hamilton Street
Geneva, New York
VERTEX Project No. 11412

Dear Ms. Barrett:

Vertex Environmental Services, Inc. (VERTEX) is pleased to submit this Phase I Environmental Site Assessment report for the above referenced property (the site). The primary purpose of this assessment was to identify *recognized environmental conditions* in connection with the subject property. Recognized environmental conditions are defined as the presence or likely presence of hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or material threat of a release into structures on the property or into the ground, groundwater, or surface water of the property.

In conducting this assessment, VERTEX followed the E1527-05 American Society for Testing and Materials (ASTM) document entitled "Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process" for commercial real estate. In addition to the ASTM-defined environmental conditions, VERTEX also assessed the property for the potential presence of asbestos, lead paint, and radon. To the best of our knowledge, this Phase I Environmental Site Assessment report is true and accurate.

Please do not hesitate to contact us at your convenience, should you have any questions or comments regarding this report or our recommendations. It has been a pleasure working with you on this project.

Sincerely,

Vertex Environmental Services, Inc.

Jessica Demetrio Scientist I Benjamin B. Strong Vice President

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Pizza Hut

812 Hamilton Street Geneva, New York VERTEX Project No. 11412

1.0 INTRODUCTION

On November 21, 2007, VERTEX Environmental Services, Incorporated ("VERTEX") was contracted by Ms. Joni Barrett of Spirit Finance Corporation to conduct a Phase I Environmental Site Assessment of the property referenced as Pizza Hut, located at 812 Hamilton Street, Geneva, New York (the site). The site is currently owned by FFCA Acquisition Corporation. The assessment included a visual reconnaissance of the site, visual inspection of the surrounding properties from curbside, review of historical ownership and use, visual asbestos and lead-based paint surveys, review of regulatory listings, and interviews with persons knowledgeable about the site.

In conducting this assessment, VERTEX followed the E1527-05 American Society for Testing and Materials (ASTM) document entitled "Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process" for commercial real estate, as well as the All Appropriate Inquires (AAI) Final Rule of November 1, 2005. Any exceptions to, or deletions from, this practice are described in Section 9.0 of the report. The primary purpose of this assessment was to identify *recognized environmental conditions* in connection with the subject property. ASTM defines recognized environmental conditions as the presence or likely presence of hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or material threat of a release into structures on the property or into the ground, groundwater, or surface water of the property. The purpose of this practice is to define good commercial and customary practice for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. 9601) and petroleum products. As such, this practice is intended to permit

a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or *bona fide* prospective purchaser limitations on CERCLA liability. The practice constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. 9601(35)(B). In addition to the ASTM-defined environmental conditions, VERTEX also assessed the property for the potential presence of asbestos, lead paint and radon.

As part of the AAI Final Rule, Phase I ESAs must be conducted by or under the supervision of a qualified *environmental professional*. The AAI Final Rule defines an environmental professional as someone who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors of the rule. We declare that, to the best of our professional knowledge and belief, we meet the definition of *environmental professional* as defined in §312.10 of 40 CFR 312. We have specific qualifications based on education, training and experience to assess the nature, history, and setting of the subject property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

In accordance with the above-referenced agreement, VERTEX performed a visual reconnaissance of the site, noted use of adjacent properties, and conducted historical and regulatory records research. The following provides a more detailed description of the scope of services:

- Visual inspection of the site building and grounds to identify potential for on-site oil or hazardous material release(s) and issues of non-compliance.
- Visual inspection of the site to confirm the presence or absence of Polychlorinated Biphenyls (PCBs), i.e., transformers.
- Visual inspection and categorization of the use of abutting and adjacent properties as potential
 off-site sources of chemical contamination.
- Review of published federal regulatory records related to on-site activities and to potential offsite sources of oil or hazardous material contamination. Federal records reviewed include, but are not limited to, the following:

- National Priorities List (NPL)
- Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)
- Resource Conservation and Recovery Act (RCRA)
- Emergency Response Notification System (ERNS)
- Review of readily available state regulatory records and publications for environmental activities related to the site and potential off-site sources of oil or hazardous material contamination. State records reviewed include, but are not limited to, the following:
 - New York State Hazardous Waste Sites
 - New York Underground Storage Tanks (USTs) List
 - New York Leaking Underground Storage Tanks (LUSTs) List
 - New York Solid Waste Facilities/Landfill Sites
- Review of readily available historic site documents to assess for potential on-site sources of oil
 or hazardous material contamination.
- Review of local records related to historical ownership, usage and site development. This also included interviewing local environmental authorities to identify complaints, violations, citations, inspections, environmental liens, activity and use limitations (AULs), or institutional and engineering controls related to the site.
- Review of readily available plans and documents relative to construction materials utilized at the site and any historical renovation activities.
- Visual inspection of accessible interior and exterior areas of the site building(s) to assess the possible presence of asbestos containing materials (ACMs) and lead-based paint (LBP).
- Preparation of a Phase I Environmental Site Assessment report.

2.0 PROJECT SUMMARY

On November 29, 2007, VERTEX Environmental Services, Incorporated ("VERTEX") performed a Phase I Environmental Site Assessment of the property referenced as Pizza Hut, located at 812 Hamilton Street, Geneva, New York (the site). VERTEX was unable to meet with a site contact during the environmental site assessment. VERTEX was not granted access to the kitchen or back room storage areas. According to Ontario County Assessors Office, the site is currently owned by FFCA Acquisition Corporation.

The site is currently occupied with a Pizza Hut Restaurant. The total area of the site is approximately 0.86 acres. According to the Ontario County Assessors Office, the site is identified as Tax Map ID # 103-04-1-25-300. The site and site vicinity have a topography that slopes towards the east. Regional topography slopes generally to the east towards Lake Seneca.

The site is currently developed with one 1,000 square-foot, one-story building constructed in 1976. The site building has a brick frame and a flat, asphalt-shingled roof. On-site operations consist of the preparation and service of food and beverages. No significant use or storage of oil or hazardous materials was noted on-site. Additionally, no evidence of current or former underground storage tanks (USTs) or above ground storage tanks (ASTs) was identified. As such, the current use of the site is not considered a concern to this investigation.

The site is located in a commercial and residential section of Geneva, New York. The site is bordered to the south by Hamilton Street, beyond which are a Pyramid Mall, an Empire Vision Center, and a First Niagara Bank. The site is bordered to the north by residential properties. The site is bordered to the east by a KFC/Taco Bell, beyond which are a Ponderosa Steak House and Pre-Emption Road. The site is bordered to the west by a Midas Auto Service, beyond which is Tremont Street. The Midas Auto Service is not listed on any state or Federal release databases. As such, this facility is not considered a concern to this investigation. No other potential concerns were identified with the abutting or nearby property uses. Additionally, although review of historic available local, state, and federal environmental databases have revealed surrounding facilities at which releases of oil or hazardous materials have occurred, considering such factors as regulatory status, distance, and direction from the site, these facilities are not considered a concern to this investigation.

Based on a review or historical aerial photographs (1985 and 1995), historic topographic maps (1902 and 1952), and historic city directories (2006 and 2007), and information from the Town of Geneva Assessors, the site has been developed as a Pizza Hut since 1976. Prior to 1976, the site was undeveloped from at least 1902 through 1952. Surrounding areas were developed commercially since at least 1995. No concerns regarding the site or surrounding properties were noted from a review of historic documents.

Based on the age of the site building (1976), it is possible that asbestos containing materials (ACMs) and/or lead based paint (LBP) may be present in the site building. Suspect ACM noted in the site building included floor tile, drywall, wall tile, roofing materials, and acoustic ceiling tiles. These materials appeared to be in good condition at the time of the site visit. Painted surfaces within the site building also appeared to be in good condition. As such, ACMs and LBP are not considered an immediate concern to this investigation.

The site is located within a Federal EPA Radon Zone 1 radon area, meaning that average indoor radon levels are greater than 4 PicoCuries per liter (pCi/l). The USEPA action level is 4 pCi/l. Therefore, the site is located in an area with the highest radon potential. Radon is emitted through cracks in sub-grade foundations or walls. There are no sub-grade areas on-site. As such, radon is not considered an immediate concern to this investigation.

Conclusions and Recommendations

VERTEX has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of Pizza Hut, located at 812 Hamilton Street, Geneva, New York, the *site*. Any exceptions to, or deletions from, this practices are described in Section 9.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the site.

However, although not considered a REC, VERTEX recommends the following to address non-ASTM issues identified at the site:

• Prior to any demolition or renovation activities, suspect ACMs and LBP to be impacted should be analyzed for asbestos and lead content. Confirmed ACMs and LBP to be impacted should be managed in accordance with all state, local, and Federal regulations.

3.0 PROPERTY DESCRIPTION

3.1 Site Reconnaissance

A site visit was conducted by VERTEX representative Ms. Jessica Demetrio, Scientist I, between 11:00 a.m. and 12:00 p.m. on November 29, 2007. VERTEX was unable to meet with a site contact during the environmental site assessment. Additionally, VERTEX was not granted access to the kitchen or back room storage areas.

During the site visit, the weather was sunny with an approximate temperature of 45 degrees Fahrenheit. The site visit consisted of a walk-through of the site and visual reconnaissance of neighboring properties from the curbside. Photographic documentation of the site visit is included in Appendix A.

3.2 General Site Conditions

The site is located on the north side of Hamilton Street in Geneva, New York. The site consists of a 0.86 acre parcel of land identified by the Ontario County Assessors office as Tax Map ID # 103-04-1-25-300. The site location is shown on the 1990 USGS Topographic Quadrangle Map of Geneva, New York. Refer to Figure 1 - Site Locus Map.

The site is located in a commercial and residential section of Geneva, New York. The site is bordered to the south by Hamilton Street, beyond which are a Pyramid Mall, an Empire Vision Center, and a First Niagara Bank. The site is bordered to the north by residential properties. The site is bordered to the east by a KFC/Taco Bell, beyond which are a Ponderosa Steak House and Pre-Emption Road. The site is bordered to the west by a Midas Auto Service beyond which is Tremont Street.

3.3 Site Improvements

The site is currently developed with a 1,000 square-foot, one-story building constructed in 1976. The site building is currently occupied by Pizza Hut. Refer to Figure 2 - Site Schematic for a layout of the site.

3.3.1 Exterior Improvements

Exterior improvements of the site consist of asphalt-paved parking. Two dumpsters are located onsite to the north and northeast of the site building. A few trash receptacles are also located throughout the site. No evidence of significant staining was observed during site reconnaissance.

Access to the site is provided from the south Hamilton Street.

3.3.2 Building Description

The site is currently developed with a 1,000 square-foot, one-story building constructed in 1976. The site exterior has brick frame and a flat, asphalt-shingled roof. From what VERTEX was able to observe within the main entrance area, the interior of the site building consists of a dining area, kitchen, bathroom areas, and back room storage areas. Interior furnishings consist of tile and drywall walls, acoustic ceiling tiles and drywall ceilings, and tile flooring.

3.3.3 Utilities

The site is provided with electricity from a pole-mounted transformer located off-site and to the southeast of the site building. Electric services are provided by National Grid. Natural gas services are provided by NYSEG. The site is serviced by the Town of Geneva for water and sewer. According to the Town of Geneva Utilities Department, water and sewer services have been provided to the site since at least 1976.

Floor drains were observed in the bathroom areas. The drains empty into the municipal sewer system. VERTEX did not observe any grease traps located on-site.

3.4 Tenant Operations

The site building is currently utilized as a Pizza Hut restaurant. On-site operations include the preparation and service of food and beverages. No significant use of oil and hazardous materials was observed on-site. No concerns were noted regarding current tenant operations at the site.

3.5 Environmental Setting

3.5.1 Topography

The site location is shown on the 1990 USGS Topographic Quadrangle Map of Geneva, New York. The surface elevation of the site is approximately 710-feet above mean sea level. Topography across the site slopes towards the east. Regional topography slopes generally to the east towards Lake Seneca.

3.5.2 Surface Water and Wetlands

No naturally occurring surface water bodies, wetland areas, or sensitive habitats were observed on-site. The closest body of water is Lake Seneca located approximately 1 ½-mile to the east of the site.

3.5.3 Subsurface Geologic Conditions

According to the U. S. Department of Agriculture (USDA) Soil Conservation Service (SCS) for Ontario County, subsurface soil expected at the site includes Honeoye soils, characterized by silt-loams that are well drained. The geology of the site is identified as stratified sequences of the Devonian, of the Middle Devonian, of the Paleozoic Era. No bedrock outcrops were observed during site reconnaissance.

3.5.4 Groundwater Flow

Based on regional surface topography, groundwater is expected to flow in an easterly direction towards Lake Seneca. Groundwater is expected to be encountered at depths between 10 to 25 feet below ground surface. Actual local groundwater flow direction can be influenced by factors such as underground structures, seasonal fluctuations, soil and bedrock geology, and production wells, none of which were considered during this study.

4.0 HISTORICAL RECORDS REVIEW

Past land uses were investigated to identify historical practices or conditions which may have impacted the subject site. This was accomplished via an ownership records review, analysis of historic aerial photographs, topographic maps, and information obtained from the Town of Geneva and Ontario County Offices.

4.1 Prior Ownership and Usage

Prior ownership records and recent deeds were reviewed at the Ontario County Clerks Office. According to the Ontario County Clerks Office, the site is currently owned by FFCA Acquisition Corporation. A summary of available previous site ownership is provided in Table 4.1.1:

Table 4.1.1 – Deed Information					
Grantor	Grantee	Instrument Number	Date		
Pizza Hut of America Inc	FFCC Acquisition Corporation	1997-0984692	9/9/1997		
Pizza Hut of North Haven	Pizza Hut of America Inc	1997-0984/692	9/9/1997		
Raymond & Oliver Moore	Pizza Hut of North Haven	1997-0757218	5/25/1976		

Due to the lack of deed references, VERTEX was unable to trace ownership records prior to 1976. No historical concerns were identified through the review of ownership records for the site. No environmental liens or Activity and Use Limitations (AULs) were noted through review of ownership records. Review of previous ownership records did not reveal evidence of previous industrial uses of the site. Previous owners were not available to be interviewed.

4.2 Aerial Photography

VERTEX requested historic aerial photographs of the site from EDR, Inc. Photographs dated 1985 and 1995 were reviewed. Copies of the aerial photographs are included in Appendix C. A summary of the information from these photographs is presented below:

<u>1985 Aerial:</u> The site appears to be developed with its current improvements. Areas to the north, south, and west of the site appear to be undeveloped land. East of the site appears to be

developed with a commercial structure. Due to the quality of the photograph, further detail could not be determined.

<u>1995 Aerial</u>: The site appears similar to the 1985 aerial photograph. North of the site appears to be developed residentially. Areas to the south, east, and west are developed with commercial structures.

Based on a review of historic aerial photographs, the site was developed with its current improvements from at least 1985 through 1995. Surrounding properties to the south, east, and west were developed with commercial structures while to the north was a residential area since at least 1995. No concerns regarding the site or surrounding properties were noted from a review of historic aerial photographs.

4.3 Topographic Maps

Topographic maps including the subject site and adjoining properties were obtained from EDR. Topographic maps dated 1902 and 1952 were reviewed. Copies of the topographic maps are included in Appendix C. A summary of the information obtained from the review is provided below:

1902 Topographic Map: This map depicts the site and site vicinity as undeveloped.

<u>1952 Topographic Map</u>: The site and site vicinity appear similar to the 1902 topographic map.

Based on review of the historic topographic maps, the site appears to have been undeveloped from 1902 through 1952. Surrounding properties also appear to have been undeveloped from 1902 through 1952. No concerns were noted through a review of the topographic maps.

4.4 City Directories

VERTEX reviewed city directories dated 2006 and 2007 at the Sullivan Free Public Library. City directory listings for the site and surrounding properties are summarized in Table 4.4.1 below. The site address is noted in bold.

	Table 4.4.1 City Directories for Hamilton Street				
Date	Address	Occupant			
2007	810	KFC/Taco Bell			
	811	First Niagara Bank			
	813	Xxx			
	815	Chapter One Bank			
	816	Midas Auto Service			
	820	Discount Liquors			
	824	Clarks Motel			
	825	Express Mart			
2006	795	Biglots			
	800	XXX			
	810	KFC/Taco Bell			
	813	XXX			
	815	Chapter One Bank Citizens Bank			
	816	Midas Auto Service			
	820	Discount Liquors			
	824	Clarks Motel			
	825	Express Mart			

The site address was not listed. Surrounding properties remained primarily commercial. The Midas Auto Service listed at 816 Hamilton Street is located west and hydraulically upgradient from the site. However, this facility is not listed on any state or Federal release databases nor are any violations reported for this facility. As such, this facility is not considered a concern to this investigation. No concerns were noted regarding the site or surrounding properties from a review of the historic city directories.

4.5 Sanborn Fire Insurance Maps

VERTEX contracted EDR to conduct a search for historic Sanborn Fire Insurance (Sanborn) maps for the site and immediate vicinity. No Sanborn map coverage was available for the site.

4.6 Previous Environmental Investigation

VERTEX was provided with a previous Phase I ESA report for the subject site. Refer to the following discussion below for a summary of information provided in this report:

<u>Phase I Environmental Site Assessment Report, prepared by VERTEX Engineering Services</u> dated December 6, 2004

On November 18, 2004, VERTEX Engineering Services performed a Phase I ESA of the Pizza Hut restaurant located at 812 Hamilton Street, Geneva, New York. According to the VERTEX report, the 1953 aerial photograph depicted the site as undeveloped. The 1979 aerial photograph depicted the site with its current improvements. The report also stated that the site consists of one parcel of land approximately 0.40-acres. VERTEX noted that electric services are provided by Niagara Mohawk. Typical fast food restaurant operations were also performed on-site during the time of the site assessment. VERTEX also stated that the Midas Service Center to the west of the site was not considered a concern based on the lack of UST records or any other state or Federal listings. No evidence of oil or hazardous material use or storage was observed on-site. Based on the environmental site assessment and a review of historic documents, VERTEX did not identify any RECs associated with the subject site or surrounding properties. VERTEX recommended no further investigation.

VERTEX generally concurs with the findings presented in the VERTEX Engineering Services report Phase I ESA. However, According to the Town of Geneva municipal offices, electric services are provided to the site by National Grid. VERETX was also informed by the Ontario County Assessor's Office that the site consists of one parcel of land that is 0.86-acres, not 0.40-acres as previously noted.

5.0 REGULATORY AGENCY RECORDS SEARCH

VERTEX procured and reviewed a database report from Environmental Data Resource, Inc. (EDR). The EDR report may be referenced in Appendix B. A review of databases and files from federal, state, and local environmental regulatory agencies was conducted to identify use, generation, storage, treatment or disposal of hazardous materials and chemicals, or release incidents of such materials which may impact the site. The databases discussed in the following sections address ASTM requirements. Additional federal and state databases were also reviewed. Please refer to the EDR report for a detailed listing.

The federal records reviewed include: CERCLIS, NPL, Resource Conservation Recovery Information System (RCRIS), and ERNS.

State records reviewed include: New York registered USTs, New York leaking USTs (LUST), New York state hazardous waste sites (SHWS), and New York state solid waste facilities/landfill sites (SWF/LS).

In addition, VERTEX conducted a review of records at various local agencies that may be referenced in Appendix D. Interviews were conducted with officials from these agencies to obtain specific information about areas located on or near the subject site with reported problems.

Included in the EDR database report is an orphan summary. This summary identifies facilities that are contained on one of the above-referenced databases or lists, but that did not contain complete or accurate geographic data. Consequently, EDR was unable to map the facilities in relation to the site. As part of this investigation VERTEX reviewed the orphan summary. Properties located within ASTM search distances of the subject site were incorporated into VERTEX's review.

A summary of the EDR database information is provided in Table 5.1 below.

Table 5.1. EDR Database Summary				
Database	Radius	Target Property	Surrounding Facilities	
National Priorities List (NPL)	1 mile	-	0	
Delisted National Priorities List	1 mile	-	0	
Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Sites	½ Mile	-	0	
CERCLIS No Further Remedial Action Planned Sites	½ Mile	-	0	
RCRA Corrective Action Facilities (CORRACTS)	1 mile	-	0	
Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) Facilities	½ Mile	-	0	
RCRA Non-Corrective Action (TSD) Facilities	½ Mile	-	0	
RCRA Large Quantity Generators	¼ Mile	-	0	
RCRA Small Quantity Generators	¼ Mile	-	6	
Emergency Response Notification System (ERNS)	Target Property	-	0	
State Hazardous Waste Sites (SHWS)	1 Mile	-	0	
State Solid Waste Landfills (SWF/LF)	½ Mile	-	1	
Registered Storage Tank Sites (UST)	¼ Mile	-	2	
Historic Storage Tank Sites (HIST UST)	¼ Mile	-	2	
Leaking Underground Storage Tanks (LTANK)	½ Mile	-	5	
Historic Leaking Underground Stroage Tanks (HIST TANK)	½ Mile	-	5	
Voluntary Cleanup Program (VCP)	½ Mile	-	1	
Above Ground Storage Tanks (AST)	¼ Mile		3	
Drycleaners	½ Mile	-	0	
Institutional Control	½ Mile	-	0	
Manifest	½ Mile	-	5	
NY Spills	¾ Mile	-	0	
NY HIST Spills	¾ Mile	-	0	

5.1 Federal Regulatory Records

The United States Environmental Protection Agency (USEPA) July 18, 2007 National Priorities List (NPL) records were reviewed to identify facilities within one mile of the site which the USEPA has determined to represent a possible threat to public health or the environment. The site was not identified on the NPL list, nor was any property located within a one-mile radius of the site.

The USEPA April 23, 2007 Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list of known, alleged, or potentially hazardous waste facilities was reviewed. A facility's presence on the CERCLIS list does not necessarily imply federal activity at the facility, nor does it indicate that hazardous conditions necessarily exist at the location. The site was not identified on the CERCLIS database, nor was any property located within a ½-mile radius of the site.

The USEPA CERCLIS-NFRAP database dated June 21, 2007 was reviewed. CERCLIS facilities designated "No Further Remedial Action Planned" (NFRAP) have been removed from the CERCLIS list. NFRAP facilities may be locations where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the facility to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. The site was not identified on the NFRAP database, nor was any property located within a ½-mile radius of the site.

The USEPA CORRACTS database dated June 26, 2007 was reviewed. The CORRACTS database identifies hazardous waste handlers with RCRA corrective action activity. The site was not identified on the CORRACTS database, nor was any property located within a 1-mile radius of the site.

The USEPA June 13, 2006 Resource Conservation and Recovery Information System (RCRIS) list of hazardous waste generators was reviewed. The RCRIS list identifies facilities which generate, treat, transport, store, and dispose of hazardous waste. A facility's inclusion on this list does not necessarily indicate that hazardous conditions exist at that location. The site was not identified on the RCRIS database; however, six Small Quantity Generator facilities were identified within a ¼ - mile radius of the site. Of these facilities, one facility is located greater than 1,000-feet from the site and is therefore not considered a concern to this investigation. The remaining five facilities are summarized in Table 5.1.1 below.

Table 5.1.1 RCRA Facilities					
Facility Name	Address	Distance/Direction	Hydrogeologic Relationship	Status	
K-mart #7025	785 Canandaigua Road	305-feet southeast	crossgradient	Small Quantity Generator, no violations found	
Alleson Of Rochester	833 Canandaigua Road	673-feet west	upgradient	Small Quantity Generator, no violations found	
Mahoney Bros Service Center	836 Canandaigua Road	800-feet west	upgradient	Small Quantity Generator, no violations found	
NYSDEC	836 Canandaigua Road	800-feet west	upgradient	Small Quantity Generator, no violations found	
Penske Auto Center	785 Canandaigua Road	826-feet west	upgradient	Small Quantity Generator, no violations found	

Based on the distance from the site, assumed groundwater flow direction, and regulatory status, these facilities are not considered a concern to this investigation.

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil and hazardous material. The database contains information from spill reports made to federal authorities including the USEPA, the US Coast Guard, The National Response Center, and the Department of Transportation. According to the EDR report, the site was not identified on the ERNS list dated December 31, 2006.

5.2 State Regulatory Records

The August 15, 2007 list of State Hazardous Waste Sites (SHWS) maintained by the New York Department of Environmental Conservation (NYSDEC) was reviewed. The site was not listed, nor was any facility located within a one-mile radius from the site.

The August 7, 2007, list of Solid Waste Facilities and Landfills (SWF/LF) maintained by NYSDEC was reviewed. The site was not identified on the SWF/LF database; however, one facility was identified within a ½-mile radius of the site. Geneva Rural Transfer at 3750 County Road 6 is approximately 1,958 feet south-southwest and hydraulically downgradient of the site. Based on distance from site and assumed groundwater flow direction, this facility is not a concern to this investigation.

The September 14, 2007, list of registered UST facilities maintained by NYSDEC was reviewed. The site was not listed; however, two UST facilities were identified within a ¼-mile radius of the site. These facilities are summarized in Table 5.2.1 below.

Table 5.2.1 UST Facilities						
Facility Name	Address	Distance/Direction	Hydrogeologic Relationship	Status		
Express Mart #369	825 Canandaigua Road	422-feet /west- southwest	downgradient	Five active tanks		
Mahoney Bro Service Center Inc	836 Canandaigua Road	800-feet/west	upgradient	Six tanks closed on 3/1991		

Based on the distance from the site, assumed groundwater flow direction, and regulatory status (i.e., no releases reported), these facilities are not considered a concern to this investigation. A listing of these facilities was also identified in the HIST UST database.

The September 11, 2007, list of registered LTANK facilities maintained by NYSDEC was reviewed. The site was not listed; however, five LTANK facilities were identified within a ½-mile radius of the site. Of these facilities, four are located at a distance greater than 1,000-feet from the site and are therefore not considered a concern to this investigation. Penske Auto Center at 785 Canandaigua Road is located approximately 305-feet south-southwest and hydraulically downgradient of the site. According to the EDR report, a single release of an unspecified amount of waste oil occurred in 2000 at this facility caused by tank failure. Corrective action was taken and approximately 15-yards of contaminated soil were removed. No additional information was provided. However, based on assumed groundwater flow direction and distance from the site, this facility is not an immediate concern to this investigation. A listing of these facilities was also identified in the HIST LTANK database.

The September 10, 2007 VCP database maintained by NYSDEC was reviewed. The site was not listed; however, one facility was identified within ½-mile radius of the site. Former Finger Lakes Laundry at 511 West Washington Street was located approximately 2,345-feet east-northeast and hydraulically downgradient of the site. Based on distance from site and assumed groundwater flow direction, this facility is not a concern to this investigation

The September 11, 2007, list of registered AST facilities maintained by NYSDEC was reviewed. The site was not listed; however, three AST facilities were identified within a ¼-mile radius of the site. Of these facilities, one is located at a distance greater than 1,000-feet from the site and is therefore not considered a concern to this investigation. The remaining two facilities are discussed in Table 5.2.2 below.

Table 5.2.2 AST Facilities						
Facility Name	Address	Distance/Direction	Hydrogeologic Relationship	Status		
Mahoney Bro Service Center Inc	836 Canandaigua Road	800-feet/west	upgradient	Three tanks closed on 3/1991		
Kost Tire/Autocare	841 Canandaigua Road	865-feet/west	upgradient	Two in service		

Based on the distance from the site, assumed groundwater flow direction, and regulatory status (i.e., no releases reported), these facilities are not considered a concern to this investigation.

The August 27, 2007, NY Manifest database maintained by NYSDEC was reviewed. A Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility. The site was not listed; however, five Manifest facilities were identified within a ¼-mile radius of the site. K-mart #7025, Alleson of Rochester, NYSDEC, and Penske Auto Center are not considered a concern to this investigation for reasons previously discussed. The remaining facility is located greater than 1,000-feet from the site. As such, this facility is also not considered a concern to this investigation.

The September 10, 2007 list of Institutional Control facilities maintained by NYSDEC was reviewed. The site was not identified on the Institutional Controls database, nor were any facilities identified within ½ mile of the site.

The July 26, 2007 Drycleaners database maintained by NYSDEC was reviewed. The site was not listed, nor were any facilities identified within ½-mile of the site.

5.3 Local records and Interviews

On November 29, 2007, VERTEX visited the Ontario County and the Town of Geneva municipal offices to review records maintained at local agencies. During this investigation, interviews with local municipal agency personnel and review of files did not reveal evidence of releases on-site or at any facilities in the site vicinity that have not already been previously mentioned. Below is a list of the offices visited by VERTEX:

- Ontario County Assessors Office- Parcel card and tax map obtained
- Ontario County Clerks Office- Historic ownership records reviewed
- Geneva Public Library- City directories obtained
- Town of Geneva Utilities Department- Municipal water and sewer information obtained
- <u>Fire Department-</u> No information regarding USTs, ASTs, or the use or the storage of any hazardous materials was identified for the site.

• <u>Health Department-</u> VERTEX issued a Freedom of Information Act (FOIA) request regarding any current or historical septic system records.

VERTEX was not provided with a site contact throughout the environmental site assessment.

6.0 ON-SITE ENVIRONMENTAL ASSESSMENT

6.1 Storage Tanks

6.1.1 Underground Storage Tanks (USTs)

Visual evidence (i.e., pipes, vents, and dispensers) indicating current or historic on-site USTs was not observed at the site. Additionally, review of records maintained at the Town of Geneva and Ontario County municipal offices did not reveal the existence of current or historic USTs. As such, USTs are not considered a concern to this investigation.

6.1.2 Aboveground Storage Tanks (ASTs)

Visual evidence (i.e., steel support structures, concrete pads) indicating current or historic on-site ASTs was not observed at the site. Additionally, review of records maintained at the Town of Geneva and Ontario County municipal offices did not reveal the existence of current or historic ASTs. As such, ASTs are not considered a concern to this investigation.

6.2 Asbestos-Containing Materials (ACMs)

Based on the date of construction (1976), there is the potential that asbestos-containing materials (ACMs) are present in the site building. Suspect ACMs observed consisted of floor tile, drywall, wall tile, roofing materials, and acoustic ceiling tiles. No damaged (friable) ACMs were observed. As such, ACMs are not considered an immediate concern to this investigation. However, prior to any future renovation and/or demolition activities, suspect ACMs to be impacted should be sampled and analyzed for asbestos content. Confirmed ACMs should be managed in accordance with all applicable local, state, and federal regulations.

6.3 Lead Based Paint (LBP)

Based on the date of construction (1976), there is the potential that lead based paint (LBP) is present in the site building. The paint throughout the site is in good condition. Additionally, based on the fact that the site is not used for residential purposes, LBP is not considered an

immediate concern to this investigation. However, prior to any future renovation activities, suspect painted surfaces to be impacted should be sampled and analyzed for lead content. Confirmed LBP should be managed in accordance with all applicable local, state, and federal regulations.

6.4 Hazardous Material Usage

No hazardous materials were observed on site. No concerns regarding hazardous material usage were noted.

6.5 Solid Waste Management

Solid waste generated on-site is collected in two dumpsters located on-site to the north and northeast of the site building. A few trash receptacles are also located throughout the site. No evidence of significant staining or dumping was observed during site reconnaissance. As such, solid waste management is not considered a concern to this investigation.

6.6 Hazardous Waste Management

Hazardous waste is not currently generated at the site. As such, hazardous waste management is not considered a concern to this investigation.

6.7 Polychlorinated Biphenyls (PCBs) Containing Equipment

Electricity is provided to the site by a pole-mounted transformer located to the southeast of the site building. PCB labeling was not noted on the transformer. The transformer is owned and operated by the Town of Geneva, which would be responsible for cleanup in the event of a release. Therefore, this transformer is not considered a concern to this investigation.

6.8 Water, Wastewater and Storm Water

6.8.1 Water Supply

The site is serviced by the Town of Geneva with municipal water. According to the Town of Geneva Utilities Department, municipal water service was connected at the site in 1976. No issues with regard to water supply were noted for the site.

6.8.2 Wastewater

The site is currently connected to the municipal sewer. According to municipal officials, the site has been connected to municipal sewer since its original construction in 1976. No issues with regard to sewer supply were noted for the site.

Floor drains were observed in the bathroom areas. The drains empty into the municipal sewer system. VERTEX did not observe any grease traps located on-site.

6.8.3 Storm Water

Storm water is directed to drains on Hamilton Street and on-site which drain to the municipal storm sewer system. According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Community Panel 3606000001B for Ontario County, New York, the site is located outside the 500-year flood zone. No concerns regarding current storm water management were noted during this investigation.

6.9 Surface Water and Wetlands

No naturally occurring surface water bodies, wetland areas, or sensitive habitats were observed on-site. The closest body of water is the Lake Seneca located approximately 1 ½-mile east of the site.

6.10 Radon

The site is located within a Federal EPA Radon Zone 1 radon area, meaning that average indoor radon levels are greater than 4 PicoCuries per liter (pCi/l). The USEPA action level is 4 pCi/l. Therefore, the site is located in an area with the highest radon potential. Radon is emitted through cracks in sub-grade foundations or walls. There are no sub-grade areas on-site. As such, radon is not considered an immediate concern to this investigation.

6.11 Air Emissions

There were no observed emissions from operations on site that required permitting, emission controls, or abatement activities. No controls were identified as being required during this assessment.

6.12 Site Specific Environmental Issues

There were no site-specific environmental concerns identified during the assessment other than those discussed within previous sections of this report.

7.0 REVIEW OF NEARBY/ADJACENT PROPERTIES

The site is located in a commercial and residential section of Geneva, New York. The site is bordered to the south by Hamilton Street, beyond which are a Pyramid Mall, an Empire Vision Center, and a First Niagara Bank. The site is bordered to the north by residential properties. The site is bordered to the east by a KFC/Taco Bell, beyond which are a Ponderosa Steak House and Pre-Emption Road. The site is bordered to the west by a Midas Auto Service beyond which is Tremont Street.

The Midas Auto Service is not listed on any state or Federal release databases. As such, this facility is not considered a concern to this investigation.

Several additional facilities were identified within ASTM search distances of the site at which a release of oil or hazardous materials has occurred. However, based on their distance from the site and the assumed groundwater flow direction in the site vicinity, the facilities are not considered a concern to this investigation.

8.0 CONCLUSIONS AND RECOMMENDATIONS

VERTEX has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of Pizza Hut, located at 812 Hamilton Street, Geneva, New York, the *site*. Any exceptions to, or deletions from, this practices are described in Section 9.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the site.

However, although not considered a REC, VERTEX recommends the following to address non-ASTM issues identified at the site:

• Prior to any demolition or renovation activities, suspect ACMs and LBP to be impacted should be analyzed for asbestos and lead content. Confirmed ACMs and LBP to be impacted should be managed in accordance with all state, local, and Federal regulations.

9.0 QUALIFICATIONS

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This warranty is in lieu of all other warranties either expressed or implied. VERTEX is not responsible for the independent conclusions, opinions or recommendations made by others based on the records review, site inspection, field exploration, and laboratory test data presented in this report.

It should be noted that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and site evaluation. Subsurface conditions were not field investigated as part of this study and may differ from the conditions implied by the surficial observations. Additionally, the passage of time may result in a change in the environmental characteristics at this site and surrounding properties. This report does not warrant against future operations or conditions, nor does this warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit.

This study is not intended to assess or otherwise determine if any soil contamination, waste emplacement, or groundwater contamination exists. These data are accessible only by subsurface material and groundwater sampling through the completion of soil borings and the installation of monitoring wells. The scope of work, determined by the client, did not include these activities.

It must be noted that no investigation can absolutely rule out the existence of any hazardous materials at a given site. This assessment has been based upon prior site history and observable conditions. Existing hazardous materials and contaminants can escape detection using these methods.

Our conclusions regarding the potential environmental impact of nearby, off-site facilities on the subject site are based on readily available information from the environmental databases and the assumed groundwater flow direction. A detailed file review of each facility was beyond the

scope of work. Actual subsurface groundwater conditions can only be determined through the installation of monitoring wells.

The client has not provided VERTEX with any specific relevant information with respect to the environmental condition of the site. VERTEX was not provided with any information regarding the purchase price compared to the fair market value of the site.

VERTEX reviewed past ownership of the project site in an attempt to determine past site usage. VERTEX is not a professional title insurance firm and makes no guarantee, explicit or implied, that the listing which was reviewed represented a comprehensive delineation of past site ownership or tenancy for legal purposes.

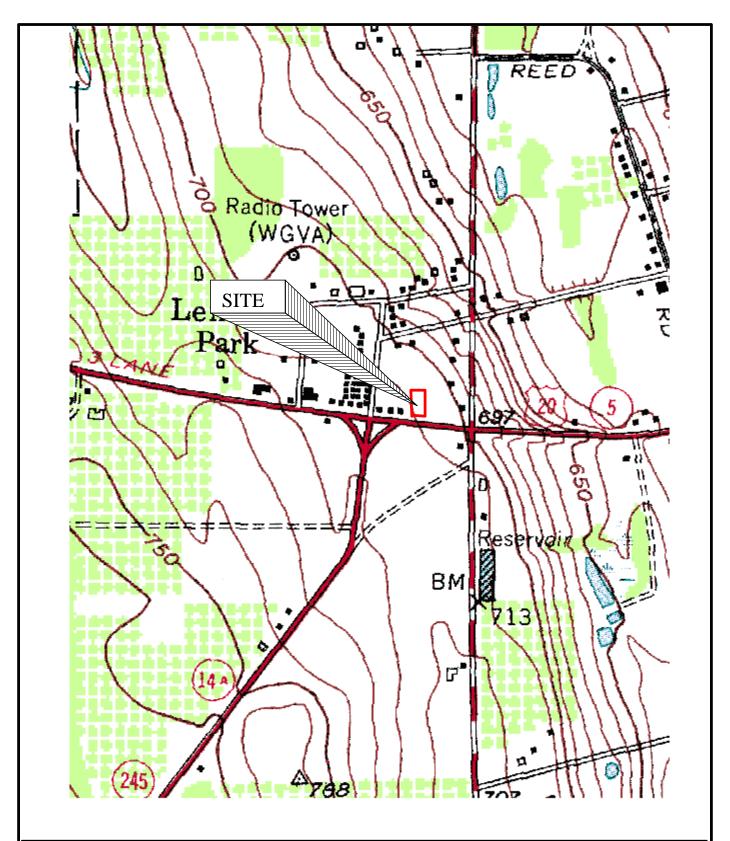

Significant data gaps which would affect VERTEX's ability to identify recognized environmental conditions at the site were not identified during this investigation. During this investigation, VERTEX was provided access to all interior and exterior areas of the site.

This report is for the exclusive use of Spirit Finance Corp., and no other party shall have any right to rely on any service provided by VERTEX without prior written consent.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/13/2006 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

STATE AND LOCAL RECORDS

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 10/26/2007 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 10/02/2007 has revealed that there are 5 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 5 HIST LTANKS sites within approximately 0.5 miles of the target property.

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 08/27/2007 has revealed that there are 5 NY MANIFEST sites within approximately 0.25 miles of the target property.

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

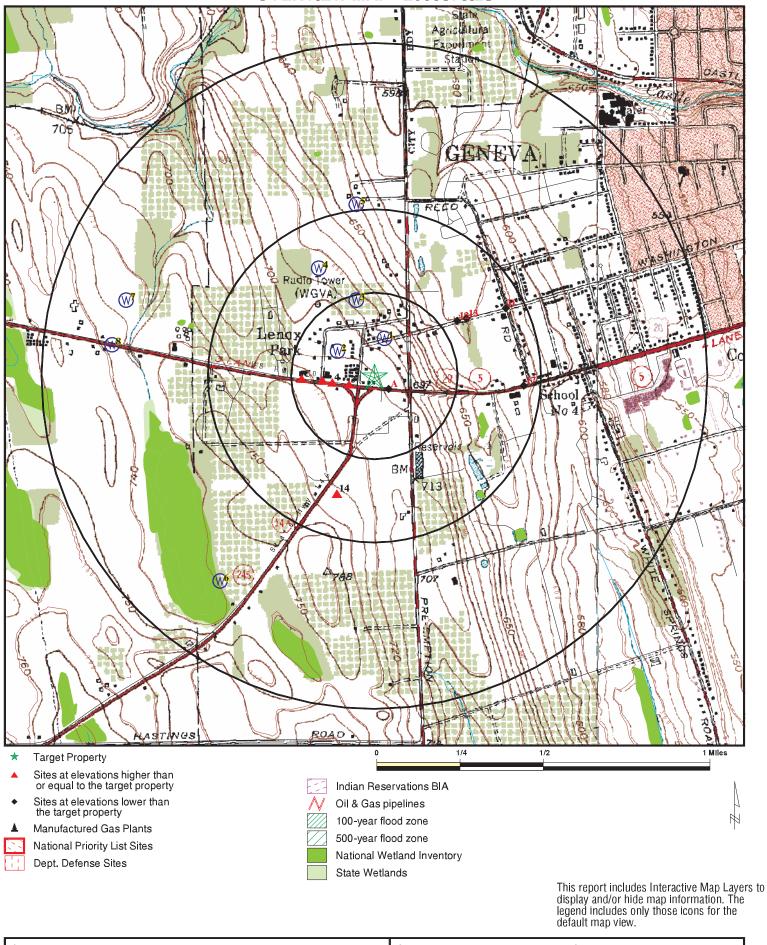

A review of the VCP list, as provided by EDR, and dated 08/15/2007 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Actual: Site Code: 56830 620 ft. Assessment: Not reported

Env Problems: Data show remedy is effective and the site may be redeveloped with some

conditions (e.g., commercial/industrial use, prohibition on disturbance of

remediated area and on use of groundwater).

Site Desc: The site is approximately 2.3 acres in size and is currently undeveloped.

> Surrounding land use includes residential (north, south and east of the site) and commercial (west of the site). From approximately 1969 to 1989, Finger Lakes Laundry & Department and Laundry and dry cleaning business at the site. Releases of tetrachloroethene (PCE) and Stoddard solvent has resulted in soil and groundwater contamination. The property was acquired by the volunteer, The Savings Bank of the Finger Lakes, through foreclosure proceedings on April 13, 1989. The bank conducted independent work in the early to mid-1990s (building demolition and waste removal; limited soil

removal; groundwater/soil sampling) and entered the VCP in 1997for investigation and 1999 for remediation. The investigation included a comprehensive passive soil gas survey, an extensive boring program with soil and groundwater sampling, installation and sampling of several groundwater monitoring wells, determination of hydrogeologic properties and a survey and sump sampling of a residential basement. Investigation results indicated that soil and groundwater impacts were largely restricted areally to the north central part of the site (vicinity of former UST and dry cleaning room) and vertically to a depth of about 10-12 feet (interface of silt and clay glacial lake beds with underlying dense clayey till). Data indicated that the soils were primarily impacted by petroleum-based Stoddard solvents, whereas the groundwater was primarily impacted by chlorinated solvents. Chlorinated

hydrocarbons in groundwater exceeded 40 mg/l in two discrete areas (MW-8b and

the MW-4). Groundwater flow is northward at a rate of 5-15 feet year; offsite impacts currently appear minimal. Remediation implemented in 2000 included: - removal and disposal of approximately 2000 tons of contaminated soil (the major contaminant sources were removed but some residual contamination remains, confirmatory sampling showed up to 300 ppm of PCE); - installion of a soil cap; - installation of a continuous 200-foot Permeable Reactive (iron) Barrier to treat contaminated groundwater(data to date indicate that the PRB is effectively treating the dissolved contaminant plume); and - implementation of an OM&M Plan which includes long-term monitoring and deed restrictions (including restrictions on construction in the area of concern and on future use to only commercial or industrial uses excluding childcare/day-care facilities, hospitals, and residential health care facilities as well as limitations on construction and groundwater use.) Several years of monitoring data indicate that the remedy is effective and a liability release letter was issued in 2002.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/09/2007 Source: EPA

Date Made Active in Reports: 10/11/2007 Last EDR Contact: 08/31/2007

Number of Days to Update: 36 Next Scheduled EDR Contact: 10/29/2007
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/23/2007 Date Data Arrived at EDR: 06/20/2007 Date Made Active in Reports: 08/29/2007

Number of Days to Update: 70

Source: EPA

Telephone: 703-412-9810 Last EDR Contact: 09/19/2007

Next Scheduled EDR Contact: 12/17/2007 Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

STATE AND LOCAL RECORDS

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its

fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

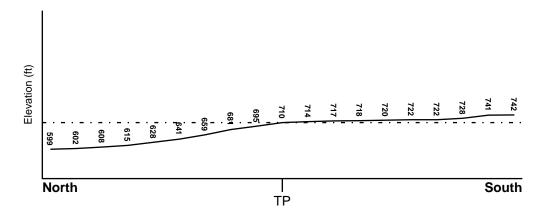

TOPOGRAPHIC INFORMATION

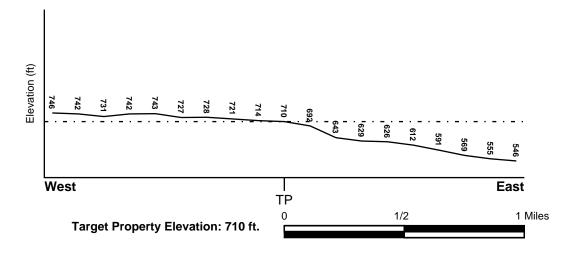

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Paleozoic Category: Stratified Sequence

System: Devonian Series: Middle Devonian

Code: D2 (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: HONEOYE

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to

water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

	Soil Layer Information								
	Boundary			Classification					
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)		
1	0 inches	8 inches	silt loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.50 Min: 5.60		
2	8 inches	26 inches	gravelly - loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 7.80 Min: 5.60		
3	26 inches	72 inches	gravelly - loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel	Max: 0.20 Min: 0.00	Max: 8.40 Min: 7.40		

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam

gravelly - silt loam

Surficial Soil Types: loam

gravelly - silt loam

Shallow Soil Types: gravelly - silt loam

Deeper Soil Types: loam

gravelly - silt loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
