Re: Phase II Sampling Results and Limited Surface Soil Remediation
Universal Rundle Facility
Monroe, Georgia

Dear Mr. Beidler:

This report provides a summary of the results of the Phase II Environmental Site Assessment (ESA) soil sampling and limited surface soil remediation conducted by ENVIRON International Corporation (ENVIRON) at the Universal Rundle facility located at 150 West Vine Street in Monroe, Georgia (the "site") (Figure 1). The sampling was conducted to characterize the environmental impact (if any) associated with visual staining and stressed vegetation observed within grass-covered areas surrounding a drum storage area identified as a recognized environmental condition (REC) in a December 2004 Phase I ESA prepared by the URS Corporation. Limited surface soil remediation was conducted to satisfy the Minimum Required Action (MRA) for the drum storage area.

1.0 Phase II Field Activities

ENVIRON mobilized to the site with U.P. Spec Services, Inc. (UP Spec) and Environmental Monitoring Services, LLC (EM Services) on April 11, 2006. Three soil borings were advanced into the subsurface utilizing direct-push technology (DPT). Prior to commencement of drilling activities, UP Spec identified buried utilities in the vicinity of the boring locations, allowing drilling activities to proceed with minimal hazard to striking underground utilities. Soil boring activities were performed by EM Services under ENVIRON's guidance. Continuous soil samples were collected from each boring to enable screening of the soil profile with a photo-ionization detector (PID) to help identify intervals with potentially significant soil contamination.

ENVIRON's sampling program included the collection and laboratory analysis of soil samples from three locations (GP-4, GP-5, and GP-6) within the vicinity of the drum storage area (Figure 2). Soil samples were collected from the depth interval that yielded the highest PID detections or at 10-feet below ground surface (bgs) if there were no PID detections in the soil profile. The depths and analytical parameters for each soil sample are summarized on Table 1. Soil boring and sampling logs are provided as Attachment A to this report.

To evaluate shallow ground water conditions beneath the site, the probe was advanced to refusal at a total depth of 26 feet bgs at GP-4 and to 24 feet at an offset location proximate to GP-4; no ground water was encountered at either location.

All soil samples were hand delivered under appropriate chain-of-custody protocol to Analytical Environmental Services, Inc. (AES) located in Atlanta, Georgia, and were analyzed by United States Environmental Protection Agency (USEPA) SW846 methods (Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, Fourth Edition). Specifically, soil analytes included volatile organic compounds (VOCs) by USEPA Method 8260 and polyaromatic hydrocarbons (PAHs) by USEPA Method 8270.

2.0 Soil Sampling Results

There were no VOCs or PAHs identified above laboratory detection limits in any of the soil samples. The AES laboratory analytical report for the sampling results is provided as Attachment B and includes Level I and II data deliverable components. The upper 10 feet of soils logged during boring installation were dominated by fine-grained clays and silts.

3.0 Quality Assurance / Quality Control Procedures

A quality assurance/quality control (QA/QC) program was implemented for the field program as specified in the Phase II SOW to confirm consistent and accurate results during the investigation. Both laboratory and field samples were evaluated according to USEPA protocols and consistent with the Phase II SOW. Field QA/QC procedures included the decontamination of sample collection equipment between borings and the collection of a duplicate sample (DUP-1). Laboratory QA/QC procedures included the analysis and review of method blanks, matrix spikes, duplicate analyses, and surrogate spikes as well as standard equipment calibrations. Sample integrity QA/QC procedure included a trip blank that accompanied the VOC containers and samples. The results of these procedures are provided in the enclosed AES report (Attachment B) and indicate no significant QA/QC concerns.

4.0 Drum Storage Area Minimum Required Action

In order to satisfy the MRA for the drum storage area, ENVIRON mobilized to the site on July 9-10, 2007 to perform limited surface soil removal within the drum storage area. Visual impacts to surface soils within the drum storage area were identified during a Phase I ESA that was conducted by URS Corporation in December 2004. As discussed above, ENVIRON conducted a limited Phase II ESA within the drum storage area during April 2006, the results of which indicated that visually-impacted surface soil have not adversely affected subsurface soils or ground water beneath the drum storage area. As such, ENVIRON's July 2007 limited surface soil removal activities were limited to the physical removal (i.e., excavation) of all visually-impacted soils within the drum storage area.

Visually-impacted surface soils within the drum storage area covered an estimated 150 square feet, the entirety of which was underlain by asphalt or concrete. Surface soils were excavated via hand shovel to the top of the asphalt/concrete, which was present between 2 and 6 inches below grade. Following the removal of all visually-impacted surface soils, the area was pressure washed and backfilled with gravel, where appropriate. Due to the presence of asphalt or concrete beneath the subject area, no confirmatory soil samples were collected. A photographic summary of the remediation activities are included as Attachment C.

All excavated soils were placed into clean, 55-gallon drums. Upon completion, the drums were sealed, labeled, and staged for future disposal. On December 19, 2007, four drums of excavated soil were transported off-site for disposal at Clean Harbors Chattanooga LLC in Chattanooga, Tennessee by Clean Harbors Environmental Services of Tucker, Georgia. A copy of the waste disposal manifest is provided herein as Attachment D.

5.0 Reliance and Limitations

This assessment has been prepared exclusively for use by Mr. Reed Beidler and may not be relied upon by any other person or entity without ENVIRON's express written permission. The conclusions presented in the report represent ENVIRON's best professional judgment based upon the information available and conditions existing as of the date of the Phase II ESA. In performing its assessment, ENVIRON must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that information provided to ENVIRON was accurate and complete. This report is not intended as a substitute for legal advice, nor is it an exhaustive review of site conditions. Although our Scope of Work for this assignment did include collecting samples of environmental media, this Phase II ESA cannot rule out the existence of latent conditions and is intended, consistent with normal standards of practice and care, to assist the Client in identifying the risks of such conditions.

5.0 Conclusions

In April 2006 ENVIRON conducted a Phase II environmental site assessment at the Universal Rundle facility in Monroe, Georgia. The Phase II ESA was conducted in accordance with the Phase II SOW to evaluate environmental conditions within the vicinity of the drum storage area. VOCs and PAHs were not detected in any soil sample collected from within the vicinity of the drum storage area. Ground water was not encountered at any of the soil sampling locations. In July 2007, ENVIRON excavated and disposed of all visually-impacted surface soils within the drum storage area. As such, ENVIRON believes that the drum storage area does not constitute a recognized environmental condition (REC) pursuant to ASTM 1527-05 and that no further action is warranted with respect to the drum storage area.

If you have any comments or questions pertaining to the above, please do not hesitate to contact us at 703.516.2300. Thank you for the opportunity to work with you on this project.

Sincerely,

Randall F. Martel
Manager

RE: Universal Rundle

Order No.: 0604551

Dear Ken Nye:

Analytical Environmental Services, Inc. received 5 samples on 4/11/2006 5:25:00 PM for the analyses presented in the following report.

No problems were encountered during the analyses. Additionally, all results for the associated Quality Control samples were within EPA and/or AES established limits. Any discrepancies associated with the analyses contained herein will be noted and submitted in the form of a project Case Narrative. Sample results are not dry weight corrected, unless if Pmoist analysis are requested on the chain of custody or other project specific arrangements have been made.
AES' certifications are as follows:
-NELAC/Florida Certification number E87582 for analysis of Environmental Water, soil/hazardous waste, and Drinking Water, effective 06/01/05-06/30/06.
-AIHA Certification number 505 for analysis of Industrial Hygiene samples (Organics, Inorganics), Paint Chips, Soil and Dust Wipes, effective until 02/01/07.

These results relate only to the items tested. This report may only be reproduced in full and contains 28 total pages (including cover letter).

If you have any questions regarding these test results, please feel free to call.

Sincerely,

Allison Cantrell
Project Manager
