SUBJECT: Notification of Permit by Rule Operation
Inert Landfill, Walton County
PBR-147-20 IL

Dear Mr. Spears:

The Commercial/Industrial Solid Waste Program has received your notification for an inert waste landfill located at the Universal Rundle Plant in Walton County. Your inert waste landfill operation shall be deemed to have a solid waste handling permit by rule if it complies with Section 391-3-4-.06(3)(c):

1. Only waste that will not or is not likely to produce leachate of environmental concern may be disposed of in an inert waste landfill. Only earth and earth-like products, concrete, cured asphalt, rock, bricks, yard trash, and land clearing debris such as stumps, limbs and leaves, are acceptable for disposal in an inert waste landfill.
2. Materials placed in inert waste landfills shall be spread in layers and compacted to the least practical volume.
3. A uniform compacted layer of clean earth cover no less than one (1) foot in depth shall be placed over all exposed inert waste material at least monthly.
4. The inert waste landfill site shall be graded and drained to minimize runoff onto the landfill surface, to prevent erosion and to drain water from the surface of the landfill.
5. Access to inert waste landfills shall be limited to authorized entrances which shall be closed when the site is not in operation.
6. Suitable means shall be provided to prevent and control fires. Stockpiled soil is considered to be the most satisfactory fire fighting material.
7. A uniform compacted layer of final cover not less than two (2) feet in depth and a vegetative cover shall be placed over the final lift not later than one month following final placement of inert waste within that lift.
8. Notice of final closure must be provided to the Director within 30 days of receiving the final load of waste. Any site not receiving waste for in excess of 180 days shall be deemed abandoned and in violation of these Rules unless properly closed. Notice of closure must include the date of final waste receipt and an accurate legal description of the boundaries of the landfill.

9. All deeds for real property which have been used for landfilling shall include notice of the landfill operations, the date the landfill operation commenced and terminated, an accurate legal description of the actual location of the landfill, and a description of the type of solid wastes which have been deposited in the landfill. Concurrent with the submission of notice of final closure to the Director, the owner or operator must submit to the Director confirmation that the information required in this section has been noticed on the property deed.
10. All wastes received at the landfill must be measured and reported as required by Rule .17.
11. All other applicable federal, state, and local laws, rules and ordinances, including erosion and sediment control, and any applicable federal wetlands permits, must be fully complied with prior to commencement of landfilling operations.

A copy of the Rules for Solid Waste Management, Chapter 391-3-4, is enclosed for your information. Please carefully review definitions and requirements pertaining to your inert waste landfill. Violation of any of the applicable requirements will invalidate your permit by rule status.

This Permit by Rule does not supersede any approvals or permits that may be required by any other existing Federal, State or local ordinances, or rules and regulations. Wetland areas are protected under Section 404 of the Clean Water Act and are regulated by the U.S. Army Corps of Engineers. Filling in such an area without obtaining permission from the Corps of Engineers may violate Federal Law. If you have any questions regarding this matter, please contact me at (404)362-2692.

Sincerely,

Brian K. Wright
Environmental Engineer
